## HS Laboratories

As different laboratories have different requirements, whether pharmacy, computer, chemistry or bio-science, Prolab has been designed and developed by Carella to provide a flexible and adaptable laboratory system.

Available in fixed, suspended and mobile options, careful attention to detail and an understanding of the requirements of users in situations with perimeter and peninsular layouts and including various re-agent shelves, ensures that Carella maintains a leading position in laboratory design and installation.

Various specifications of carcass and worksurfaces are offered with Trespa Toplab plus, epoxy resin, laminate and other approved surfaces.
