

## QB Integrated Panel Systems

**QB Integrated Panel Systems** has been designed in close consultation with architects, builders and mechanical & electrical engineers. Carella has designed a framing system with 100% of fabrication off-site to provide speedy installation, with fixed or removable access panels on specially designed QB brackets to cover all configurations. This eliminates other trades such as joiners and plasterers. QB Integrated Panel Systems offers a hygienic and aesthetic solution to conceal unsightly ducting, pipework and services. Adapted to provide a wall panelling system, QB IP Systems can provide 1/2 - 1 hour fire protection where specified.
